

IntelliKit

UPGRADEABLE INTERFACE KITS

Our IntelliKit line of programmable vehicle interface kits is the future of vehicle integration. This patented technology not only allows you to fully integrate with OEM functions like door lock control, immobilizer bypass, and OEM alarm control but you can change the module's firmware over the internet. You simply download the firmware you need and flash the module via a USB port on your computer.

Eliminate dozens of models with only a few different IntelliKit modules.

Requirements For Upgrades

- Windows based PC with Win98 or higher
- IntelliKit Software - Free Download From The www.intellikits.com
- IM-LOADER - USB PC Interface for original IntelliKit modules
- IM-LOADER2 - UCB PC Interface for all original IntelliKit and new updateable modules

IntelliKit Interface Harnesses

- **D-HARNESS:** D2D Harness To Plug IntelliKit Module Into "DP" Series Alarms
- **Y-HARNESS:** Y Harness To Plug 2 IntelliKit Modules Into "DP" Series Alarms
- **H-LOADER:** Replacement Harness For Connecting IntelliKits To The IM-LOADER
