

AL-100DP

SECURITY UPGRADE FOR FACTORY KEYLESS ENTRY

The AL-100DP upgrades an OEM remote keyless entry system to a full featured security system. It is the latest, compact generation of Omega's legendary AL-100 series of keyless upgrade system and is more flexible than ever! When incorporated with the vehicle's OEM keyless entry and doorlocking system's circuits, it arms and disarms from the lock and unlock buttons of the factory transmitters. Now, in addition to detecting lock and unlock signals, it can also be configured to monitor the OEM light flash wire. You can easily adapt to any vehicle! It includes all necessary harnesses, starter interrupt socket and relay, domelight supervision, flashing lights, horn honk or siren output, ignition controlled doorlocks, disarm upon trunk release from factory transmitter, a LED status indicator, and a valet switch.

Now with data port and backup battery!
