

STROBE KIT CONTENTS

Strobe Kit Features:

- Multi-Voltage Input: 11-30VDC - suits all vehicles.
- Waterproof - can install in engine compartment.
- Universal Xenon Bulbs - no drilling required.
- 15 Selectable Flash Patterns - for spectacular display.
- SSF Option - for connection with Car Alarm System.
- Low Power Option - for demo purpose.
- **PATENTED PRODUCT**

STROBE KIT LAYOUT

Plan your kit layout before starting installation. This is a typical layout, and may vary depending on vehicle.

Follow Steps 1-5 for installation:

- ★ POWER SUPPLY WIRING
- ★ INSTALLATION OF STROBE HEADS
- ★ WIRING EXTENSION CABLES
- ★ EZ-SWITCH FUNCTIONS
- ★ OPTIONAL WIRING

Warning: Before making any connections to the vehicle wiring, always disconnect the battery negative terminal.

★ POWER SUPPLY WIRING

The POWER SUPPLY is waterproof, and can be mounted in areas exposed to water. However, it is recommended to mount in an area where it is not exposed to excessive heat during normal operation of the vehicle.

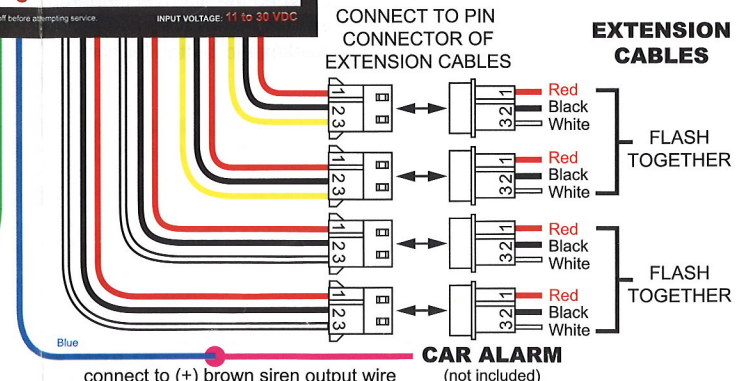

WIRE (not included)

Note: Use the correct size wire to connect to battery (+). The length of the wires determines the size needed:
 1 to 7 ft. use 18AWG wire
 7 to 14 ft. use 16AWG wire

Warning: This is a high voltage device, do not touch or remove strobe light head while in operation. Wait at least 5 minutes after disconnecting from its power source before starting work or troubleshooting.

2 INSTALLATION OF STROBE HEADS

The STROBE HEADS can be easily in the parking lights by removing the existing bulbs.

FOR T10 INSTALLATION:

1. remove existing T10 bulb.
2. push strobe head in the hole.
3. twist strobe head until tight fit.
4. insert the wire pins to connector.

FOR H3 INSTALLATION:

1. remove existing H3 bulb.
2. push strobe head in the hole.
3. secure strobe head with screw.
4. insert wire pins to connector.

3 WIRING EXTENSION CABLES

Insert wires with SOCKETS into the proper holes in the connector

Hole 3	WHITE WIRE
Hole 2	BLACK WIRE
Hole 1	RED WIRE

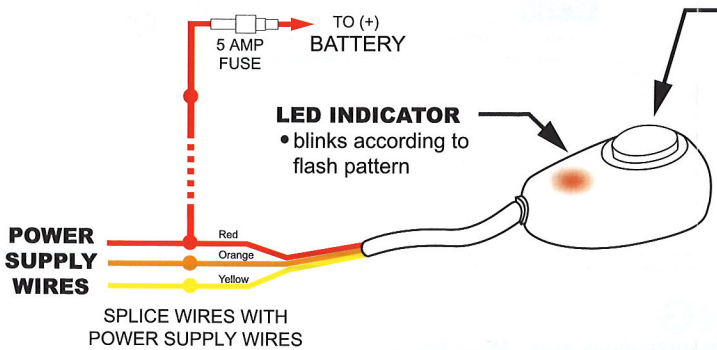

Insert wires with PINS into the proper holes in the connector

Hole 3	WHITE WIRE
Hole 2	BLACK WIRE
Hole 1	RED WIRE

4 EZ-SWITCH FUNCTIONS

The EZ-SWITCH provides complete flash pattern selection; mount around dash area.

PUSH BUTTON

- push once for on/off
- push & hold 2 seconds for next flash pattern
- push & hold 5 seconds for previous flash pattern

Note: Flash Pattern DEMO CYCLE displays all flashing patterns. This is ideal for demo cars at shows or in showrooms.

Flash Patterns

0	DEMO CYCLE - display all flashing patterns
1	QUAD, (1 ALT 2)
2	QUINT, (1 ALT 2)
3	DOUBLE, (1 ALT 2)
4	TWIN DOUBLE, (1 ALT 2)
5	MEGA, (1 ALT 2)
6	QUINT --> MEGA, (1 ALT 2)
7	DOUBLE --> QUINT, (1 ALT 2)
8	DOUBLE DELAY, (1 ALT 2)
9	QUAD DELAY, (1 ALT 2)
10	WAVE - fast to slow cycle, (1 ALT 2)
11	DUAL: WAVE - fast to slow cycle, (1 & 2)
12	DUAL: DOUBLE, (1 & 2)
13	DUAL: QUINT, (1 & 2)
14	DUAL: 1 --> 3 --> 5 Flash, (1 & 2)
15	DEF JAM MODE

*ALT = Alternating Strobe Head

*DUAL = Simultaneous Strobe Head

5 OPTIONAL WIRING

The **SSP** Smart Security Function allow the strobe kit to be synchronized with the car alarm. When the alarm is triggered, the ultra bright strobes will flash; creating an immense warning effect. The strobes can also be activated via the 'seek/panic' button for car search in big parking lots.

Connect blue wire of power supply to (+) brown siren output wire

LOW POWER The LOW POWER function is used to decrease brightness of the strobes. This is useful for demo cars in display at shows or in showrooms where it might not be possible to strobe at full brightness.

SPlice GREEN WIRE WITH RED (+) WIRE FOR LOW POWER. OR INSTALL A SWITCH TO TURN ON (low power) & OFF (high power).
